

TECMA ARIES AT INTERPACK 2026

HALL 6, STAND C59

*The end-of-line packaging expert showcases innovations across two pillars: **Smart Manufacturing & Innovative Materials***

Coulommiers, April 2026 — TECMA ARIES, the global expert in end-of-line packaging, will be exhibiting at interpack 2026 in Düsseldorf (Hall 6, Stand C59). With over 7,000 machines deployed worldwide and a presence across five continents, the group will use this leading international trade show to unveil its latest technological advances.

SMART MANUFACTURING — Intelligence at the heart of performance

TECMA ARIES will present **MY TECMA ARIES**, its innovative digital platform designed to enhance the customer experience and streamline after-sales service. Available 24/7 from any device, this solution brings together all essential technical documentation — user manuals, electrical and pneumatic diagrams, preventive maintenance guides — alongside an interactive spare parts catalogue with exploded views and online quote requests.

Beyond documentation, MY TECMA ARIES optimises every interaction between clients, field agents and the company: faster after-sales response, reduced disputes, recurring sales support, and a complete technical media library including machine demonstrations, usage tutorials and maintenance videos. A secure, always-on tool that simplifies maintenance, speeds up decisions and delivers a more efficient service.

INNOVATIVE MATERIALS — Shaping the packaging of tomorrow

TECMA ARIES is proud to introduce a breakthrough innovation in sustainable packaging: **plant fibre clips**, fully biodegradable and compostable, designed for can and bottle multipacks. Made from organic waste sourced from agricultural by-products, these clips represent a compelling alternative to conventional materials — combining genuine environmental credentials with outstanding functional performance.

Unlike plain cardboard, these plant-based clips are engineered to withstand significant temperature variations and perform reliably in humid environments, making them perfectly suited to the demanding conditions of beverage and food production lines. The result is a pack that is not only kind to the planet but also robust, reliable and ready for industrial-scale deployment.

With this innovation, TECMA ARIES reinforces its commitment to supporting clients in transitioning toward more responsible packaging, without compromising on efficiency or performance.

About TECMA ARIES

TECMA ARIES is today a globally recognised leader in the design and manufacture of end-of-line packaging equipment: carton erection, overwrapping, case packing, palletising and peripherals. With two production sites in France and a subsidiary in Dallas, TX (USA), the group serves clients across five continents. Its philosophy: the right balance between technology, simplicity and cost control, in the service of lasting client relationships.
